SPECIAL SENSES Introduction Activity 1: Observation of the ...

Lab Exercise: Special Senses, page 77 Activity 3: Accommodation The shape of the lens changes in order to see objects at different distances. The ciliary muscles control the shape of the lens allowing it to round up or flatten in order to accommodate or focus on an object. The lens of the eye is elastic which directly affects how well the eye can focus on an object at different distances.

Special Senses Anatomy and Physiology

The functions of the five special senses include: Vision. Sight or vision is the capability of the eye(s) to focus and detect images of visible light on photoreceptors in the retina of each eye that generates electrical nerve impulses for varying colors, hues, and brightness.
